**Santa Cruz, CA - Antares Audio Technologies**, creators of Auto-Tune®, the GRAMMY®-award winning software and the industry standard for vocal production, announces the immediate release of [\*\*Vocal Reverb\*\*](#).

**Vocal Reverb** uses the power of artificial intelligence to speed up the process of creating a great sounding reverb. Simply select the reverb style you want, and Vocal Reverb's AI recommends a perfect starting point, allowing you to achieve your desired vocal reverb sound quickly.

Proprietary Auto-EQ technology uses Auto-Tune pitch tracking to clean up the reverb tail. Auto-EQ does this by tracking the singer's pitch and dynamically reducing the fundamental frequency range in the reverb tail, resulting in a reverb that musically blends with the vocal.

**Vocal Reverb** offers three reverb styles and two Delay types. When the advanced panel is expanded, five Pre-Verb Effects and five Post-Verb Effects are displayed to use for more creative results.

**Vocal Reverb** also includes compelling artist presets from Bainz, Ian Kirkpatrick, Mischke, Dyryk and more spanning various vocal styles and moods, making it easy to explore new ideas.

### **Vocal Reverb Key Features:**

- AI Assist for quick optimal reverb settings
- Auto-EQ powered by proprietary Auto-Tune Pitch Tracking Technology
